CLAIMS:

1. A secure data entry peripheral device in a computer system, said device comprising:

means for at least one of entry, collection and reading of data information;

controller means for encoding said data information for presentation to the computer system, and

means associated with said controller for processing said encoded data information by performing thereon at least one operation amongst operations including encryption, decryption, data manipulation and non-volatile storage,

said processed encoded data information providing a secure transaction when transmitted within the computer system, and when decrypted and decoded for use at a remote location.

- 2. The device of claim 1 configured as a secure mouse device.
- 3. The device of claim 1 configured as a secure mouse device wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data.
- The device of claim 1 configured as a secure mouse device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data received via asynchronous communication means.
- The device of claim 1 configured as a secure mouse device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data received via computer bus signals transferred through a mouse interface card.
- 6. The device of claim 1 configured as a secure mouse device having a mini-keypad for entry of data.

8. Deleted

9. Deleted

10. Deleted

11. Deleted

- 12. The device of claim 1 wherein said single integrated device includes an internal EEPROM memory as an integral part of said device, which stores secure information.
- The device of claim 1 wherein said single integrated device includes secure, protected encryption keys and data as an internal and integral non-removable element.
- 14. The device of claim 1 wherein said single integrated device further comprises a secure command interpreter which operates to manipulate commands.
- The device of claim 1 wherein said single integrated device is capable of preventing unauthorized use of software programs.
- 16. Deleted
- 17. Deleted
- 18. Deleted.
- 19. Deleted
- 20. Deleted
- 21. Deleted
- A method of providing secure data entry in a computer system, said method comprising the steps of:

performing at least one of entry, collection and reading of data information via a standard data entry device configured as a secure keyboard device;

PCT/1199/00504 1PEA/ 01 DEC 2000

encoding said data information within said standard data entry device for presentation to the computer system, and

processing, within said standard data entry device, said encoded data information by performing thereon at least one operation amongst operations including encryption, decryption, data manipulation and non-volatile storage,

said processed encoded data information providing a secure transaction when transmitted within the computer system, and when decrypted and decoded for use at a remote location,

wherein said encoding step is performed by a keyboard encoder and said processing step is performed by an electronic device capable of encrypting/decrypting and storing data entered via said keyboard,

wherein said keyboard encoder and said electronic device comprise a single integrated device, and

wherein said single integrated device does not use removable media such as a Smartcard, security token and the like

NOTIFICATION OF TRANSMITTAL OF INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Rule 71.1)

Date of Mailing (day/month/year)

26 FEB 2001

Applicant's or agent's file reference

1063

IMPORTANT NOTIFICATION

International application No.

PCT/IL99/00504

16 SEPTEMBER 1999

Priority Date (day/month/year)

**17 SEPTEMBER 1998** 

Applicant

REDLER, YESHAYAHU

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.

International filing date (day/month/year)

- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices)(Article 39(1))(see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to\_prepare and furnish such\_translation\_directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

WO 00/17758

CLAIMS:

1. A secure data entry peripheral device in a computer system, said device comprising:

means for at least one of entry, collection and reading of data information;

controller means for encoding said data information for presentation to the

computer system, and

means associated with said controller for processing said encoded data information by performing thereon at least one operation amongst operations including encryption, decryption, data manipulation and non-volatile storage,

said processed encoded data information providing a secure transaction when transmitted within the computer system, and when decrypted and decoded for use at a remote location.

- 2. The device of claim 1 configured as a secure mouse device.
- 3. The device of claim 1 configured as a secure mouse device wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data.
- 4. The device of claim 1 configured as a secure mouse device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data received via asynchronous communication means.
- The device of claim 1 configured as a secure mouse device; wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data received via computer bus signals transferred through a mouse interface card.
- 6. The device of claim 1 configured as a secure mouse device having a mini-keypad for entry of data.

WO 00/17758 PCT/IL99/00504

7. The device of claim 1 configured as a secure mouse device wherein said controller means is a mouse encoder and said processing means comprises an electronic device capable of encrypting/decrypting and storing data entered via said mouse, and wherein said mouse encoder and said electronic device comprise a single integrated device.

- 8. The device of claim 7 wherein said single integrated device further comprises a secure command interpreter which operates to manipulate commands.
- 9. The device of claim 7 wherein said single integrated device is capable of preventing unauthorized use of software programs.
- The device of claim 1 configured as a secure keyboard device, wherein said controller means is a keyboard encoder and said processing means comprises an electronic device capable of encrypting/decrypting and storing data entered via said keyboard, and wherein said keyboard encoder and said electronic device comprise a single integrated device.
- 11. The device of claim 10 wherein said single integrated device does not use removable media such as a Smartcard, security token and the like.
- 12. The device of claim 10 wherein said single integrated device includes an internal EEPROM memory as an integral part of said device, which stores secure information.
- 13. The device of claim 10 wherein said single integrated device includes secure, protected encryption keys and data as an internal and integral non-removable element.
- 14. The device of claim 10 wherein said single integrated device further comprises a secure command interpreter which operates to manipulate commands.

WO 00/17758 PCT/IL99/00504

15. The device of claim 10 wherein said single integrated device capable of preventing unauthorized use of software programs.

- 16. The device of claim 1 configured as a secure voice recognition device, wherein said processing means comprises an electronic device capable of encrypting/decrypting analog data entered via a microphone.
- 17. The device of claim 1 configured as a secure voice recognition device, wherein said processing means comprises an electronic device capable of encrypting/decrypting data received via at least one of synchronous and asynchronous communication signals, serial clock and data signals, and computer bus signals.
- 18. The device of claim 1 configured as a secure voice recognition device including an interface to a Smartcard component as an integral part of the device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data via an algorithm contained on said Smartcard.
- 19. The device of claim 1 configured as a secure voice recognition device including an interface to a Smartcard component as an integral part of the device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data via said Smartcard..
- 20. The device of claim 1 configured as a secure voice recognition device including an interface to a Smartcard component as an integral part of the device, wherein said processing means comprises an electronic device capable of encrypting/decrypting and storing data via manipulation of commands in a command interpreter on said Smartcard.
- 21. The device of claim 1 configured as a secure voice recognition device including an interface to a Smartcard component as an integral part of the device,

WO 00/17758 PCT/IL99/00504

wherein said processing means comprises an electronic device capable of preventing unauthorized use of software programs.

22. A method of providing secure data entry in a computer system, said method comprising the steps of:

performing at least one of entry, collection and reading of data information via a standard data entry device including a computer mouse, keyboard, voice system and the like:

encoding said data information within said standard data entry device for presentation to the computer system, and

processing, within said standard data entry device, said encoded data information by performing thereon at least one operation amongst operations including encryption, decryption, data manipulation and non-volatile storage,

said processed encoded data information providing a secure transaction when transmitted within the computer system, and when decrypted and decoded for use at a remote location.

- 23. A secure data entry peripheral device in a computer system, substantially as described herein by way of example and with reference to the drawings.
- 24. A method of providing secure data entry in a computer system, substantially as described herein by way of example and with reference to the drawings.

# INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 1063		see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.		
International application No.	International filing date (day/month/year)	(Earliest) Priority Date (day/month/year)		
PCT/IL99/00504	16 SEPTEMBER 1999	17 SEPTEMBER 1998		
Applicant REDLER, YESHAYAHU				
	en prepared by this International Searching Auting transmitted to the International Bureau.	hority and is transmitted to the applicant		
X It is also accompanied by a	copy of each prior art document cited in this r	eport.		
1. X Certain claims were found	unsearchable (See Box 1).			
2. Unity of invention is lacki	ng (See Box II).			
	n contains disclosure of a nucleotide and/or ried out on the basis of the sequence listing	amino acid sequence listing and the		
	filed with the international application.			
	furnished by the applicant separately from the	international application,		
		ent to the effect that it did not include matter he international application as filed.		
	transcribed by this Authority.			
4. With regard to the title, X	the text is approved as submitted by the appli	cant.		
	the text has been established by this Authority	y to read as follows:		
	· · · · · · · · · · · · · · · · · · ·	-		
5. With regard to the abstract,				
	the text is approved as submitted by the appl	icant.		
X	the text has been established, according to Ruin Box III. The applicant may, within one international search report, submit comments	month from the date of mailing of this		
6. The figure of the drawings to be	published with the abstract is:			
Figure No. 2	as suggested by the applicant.	None of the figures.		
X	because the applicant failed to suggest a figu			
	because this figure better characterizes the in	vention.		
L				

Form PCT/ISA/210 (first sheet)(July 1992)★

Box 1 Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This international report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2. X Claims Nos.: 23 and 24 because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:  the specific invention claimed by each of claims 23 and 24 is unclear. See PCT rule 5.
3. Claims Nos.:  because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
No required additional scarch fees were timely paid by the applicant. Consequently, this international scarch report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Remark on Protest  The additional search fees were accompanied by the applicant's protest.  No protest accompanied the payment of additional search fees.

International application No. PCT/IL99/00504

Box III TEXT OF THE ABSTRACT (Continuation of item 5 of the first sheet)

The abstract is too long (PCT Rule 8.1(b)). The abstract must be less than 150 words, or 200 words when no Figure is to be published.

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

### **NEW ABSTRACT**

A secure data entry peripheral device in a computer system featuring an encryption technique integrated within the device itself, and not by other means, so that each transmission of data from the peripheral device is already encrypted, giving it a high level of security with its initial transmission. Encryption on the proposed single chip microprocessor is completely secure because the 'Keyboard', 'Data entry' or 'Analog voice' encoding and encryption are on the same chip by storing encryption keys and secure data in EEPROM memory (31). There is no opportunity for external interference, which could compromise the integrity of the data enabling maintenance of a high security level. The device can be applied to a keyboard, computer mouse or voice recognition circuit used as data entry devices. Since each device utilizes a microcontroller (25) in its standard configuration, the encryption technique of the present invention can be applied easily and efficiently.

Во	x I C	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
Thi	s inten	national report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1.		Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
2.	[X]	Claims Nos.: 23 and 24
	بت	because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
	th	e specific invention claimed by each of claims 23 and 24 is unclear. See PCT rule 5.
3.		Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and unird sentences of Rule 6.4(a).
Во	x II (	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
Thi	s Inte	mational Searching Authority found multiple inventions in this international application, as follows:
	٠.	
		•
1.		As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2.		As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3.		As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
-		
4.		No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
Re	mark	on Protest
		No protest accompanied the payment of additional search fees.
